

Notes on the
Interstellar Medium
for Asph 503

Kevin Volk
University of Calgary

1 INTRODUCTION

1.1 Introduction 1
 1.1.1 The Galaxy at Infrared Wavelengths 2
 1.2 Outline 4

2 IONIZED REGIONS

2.1 Ionized Gas 7
 2.1.1 Introduction 7
 2.1.2 Basic Theory 9
 2.1.3 Differential Ionization Balance Equation 13
 2.1.4 Justification of the Assumptions 15
 2.1.5 Complications 17
 2.2 Hydrogen Recombination Lines 17
 2.2.1 Density Effects 20
 2.2.2 Helium Recombination Lines 21
 2.3 Forbidden Lines 23
 2.4 Heating and Cooling 30
 2.4.1 Model Results 31
 2.4.2 Blackbodies versus Stellar Model Flux Distributions 33
 2.4.3 Ionization Fractions 35
 2.4.4 The “ t^2 ” Problem 35
 2.5 Continuum Emission From The Gas 37
 2.5.1 Extinction Estimates 40
 2.6 Results of Photoionization Models 41
 2.6.1 A Hot Star Nebular Model 42
 2.7 Dust Emission 44
 2.7.1 Dust Survival in Ionized Regions 47
 2.8 HII Regions As a Component of Galaxies 49
 2.8.1 Range of Properties of HII Regions 49
 2.8.2 Abundance Analysis 50
 2.8.3 He Abundances 52
 2.8.4 Spiral Structure 53
 2.9 Conclusion 53

3 MOLECULAR LINE EMISSION

3.1 Units in Radio Astronomy 55
 3.2 Hydrogen 21 cm Emission 57
 3.2.1 High-Velocity Clouds 58
 3.3 Molecular Emission 60

3.3.1	Rotational Lines.....	61
3.3.2	H ₂ Quadrupole Transitions.....	62
3.3.3	Effect of Nuclear and Electron Spin.....	63
3.3.4	Vibrational Bands.....	64
3.4	CO Observations.....	66
3.4.1	The CO/H ₂ Ratio.....	66
3.4.2	Distribution of Molecular Clouds.....	67
3.4.3	Nearby Molecular Clouds.....	71
3.5	The Canadian Galactic Plane Survey.....	73
3.6	Other Molecular Lines.....	78
3.6.1	Ammonia Lines.....	78
3.7	Molecular Masers.....	81
3.7.1	Other Maser Lines: H ₂ O.....	85
3.7.2	Rare Maser Lines.....	86
3.8	Megamasers.....	88
4	SUPERNOVA REMNANTS	
4.1	Observations of SNe.....	97
4.1.1	SN Types.....	97
4.2	Supernova Remnant Evolution.....	101
4.2.1	The Free Expansion Phase.....	101
4.2.2	The Adiabatic Phase.....	102
4.2.3	The Dimensionless Equations.....	103
4.2.4	Estimates of Values.....	106
4.2.5	Further Refinements.....	107
4.3	The “Snowplow” Phase.....	108
4.4	Comparison With Observations.....	110
4.5	Stellar Wind “Bubbles”.....	111
4.6	Supershells and the Global ISM.....	112
4.6.1	Total Power Inputs to the ISM.....	115
4.7	Observations of SNRs.....	116
4.7.1	Young SNRs.....	116
4.7.2	Older SNRs.....	119
4.8	Observed Physical Regimes in the ISM.....	124
4.8.1	Coronal Gas.....	124
4.8.2	Intercloud Gas.....	125
4.8.3	Diffuse Interstellar Clouds.....	125
4.8.4	Cold Dark Clouds.....	125
4.8.5	Globules.....	126

4.8.6	Giant Molecular Clouds	126
4.8.7	Hot Molecular Cores	127
4.8.8	HII Regions	128
4.9	Hydrodynamical Equations	129
4.9.1	The Basic Equations	130
4.9.2	Speed of Sound	132
4.10	The Virial Theorem	133
4.11	Shock Fronts	134
4.11.1	The Simplest Case: a Perfect Gas, $\vec{B} = 0$	134
4.11.2	Isothermal Shocks	137
4.11.3	Hydromagnetic Shocks	137
4.12	The Rayleigh–Taylor Instability	138
5	DUST IN THE INTERSTELLAR MEDIUM	
5.1	Introduction	145
5.1.1	The ISM Extinction Law	146
5.1.2	Optical Properties of Grains	149
5.1.3	Mie Theory	150
5.1.4	Polarization Studies	155
5.2	General Grain Properties in the ISM	158
5.2.1	Equilibrium Grain Temperatures	160
5.2.2	The 2200 Å Feature	163
5.2.3	The UIR Features and the Extended Red Emission	164
5.2.4	Putting It All Together	168
5.3	Dust in Different Phases of the ISM	169
5.3.1	Hot Grains ($T > 60$ K)	169
5.3.2	Warm Dust: $T \approx 50$ K	170
5.3.3	Cool Dust: $T \approx 15$ K	170
5.3.4	Very Cold Dust?	171
5.4	Conclusion	171
6	GIANT MOLECULAR CLOUDS	
6.1	Temperature and Density in Molecular Clouds	173
6.1.1	Rotational Lines Analysis	174
6.1.2	Temperature Estimates	175
6.1.3	Results from Temperature Determinations	177
6.1.4	Density Determinations	179
6.2	Chemistry in GMCs	180
6.2.1	Gas Phase Reactions	181

6.2.2	Deuterium Chemistry	183
6.2.3	Free Electrons in GMCs	184
6.2.4	Large Molecules	185
6.3	Shock Chemistry	186
6.4	Grain Chemistry	187
6.4.1	Dark Cloud Abundances	188
6.4.2	Hot Regions in GMCs	189
6.5	Studies of the Orion GMC	190
6.5.1	The GMC	190
6.5.2	Smaller Scale Structures	196
6.5.3	Magnetic Fields	196
6.5.4	The Optical Nebula	198
6.6	The Stellar Component	201
6.6.1	The “Blister” Model	202
6.6.2	The Trapezium Stars	203
6.6.3	The Photodissociation Region	210
6.6.4	The BN-IRC2 Star Formation Region	210
6.7	How Typical is the Orion GMC?	216
7	STAR FORMATION	
7.1	Introduction	221
7.1.1	The Effect of GMCs	222
7.2	Phases of Star Formation	223
7.2.1	Formation of a Cloud Core	223
7.2.2	Formation of a Protostar	225
7.2.3	Formation of a Disk and a Stellar Wind	231
7.2.4	Unveiling of the Young Star	233
7.3	Observations of Protostars	233
7.4	Optical Observations of Young Stars	234
7.4.1	T Tauri Stars Without Accretion	240
7.4.2	Herbig Ae/Be Stars	241
7.4.3	FU Orion Variables	246
7.4.4	Accretion onto the YSO	251
7.5	Infrared Properties of YSOs	251
7.5.1	Infrared Spectra of YSOs	253
7.6	Disks and Jets: Outflows and Herbig-Haro Objects	255
7.6.1	Observations of Infall	256
7.6.2	Molecular Outflows	256
7.6.3	Herbig-Haro Objects	260

7.6.4	The Disks	266
7.6.5	Binary Protostars	268
7.7	The Birthline	270
7.8	Higher Mass Star Formation	274
7.9	Supergiant Star Formation Complexes	275

List of Figures

Optical Image of the Milky Way.....	2
Photographic Panorama of the Milky Way.....	2
Near-infrared Sky Image.....	3
Far-infrared Sky Image.....	4
ISM Spectrum From Cobe.....	5
Optical Image of the Rosette Nebula.....	8
The Optical Spectrum of M4-17.....	10
Energy Level Diagram for p^2 Forbidden Lines.....	24
Energy Level Diagram for p^3 Forbidden Lines.....	29
Model Electron Temperature Functions.....	32
Model Ionizing Photon Fluxes.....	35
Model Electron Density Results.....	36
Model Radio Spectrum of an Ionized Region.....	39
Solar Composition Nebular Model.....	42
High Temperature Star Ionized Region Model.....	43
Dusty Ionized Region Model.....	45
ISO Spectrum of NGC 7027.....	46
ISO Spectrum of the Orion Bar.....	47
High Velocity HI Clouds.....	60
CO Rotational Level Diagram.....	63
CO Vibrational/Rotational Level Diagram.....	65
Overview of Structures in CO Maps.....	68
Velocity-Position Map for the Inner Galaxy.....	70
CO Map of NGC891.....	72
Molecular Clouds Near the Sun.....	73
High Resolution CO Map from FCRAO.....	74
(a) Comparison of CO Emission to 100 μm Emission.....	75
(b) Comparison of HI Emission to 100 μm Emission.....	76
(c) Comparison of Radio Continuum Emission to 100 μm Emission.....	77
Energy Level Diagram for the NH_3 Molecule.....	80
Energy Level Diagram for the OH Molecule.....	83
Optical Spectra of Four Supernovae.....	100
Results of the Blast Wave Similarity Solution.....	106
VLT Image of Henize 70.....	113
Images of the Crab Nebula SNR.....	118
Images of the Cas A SNR.....	120

Images of the N123D SNR	121
Images of the Cygnus Loop SNR.....	122
Images of the Hb9 SNR.....	123
Image of the Barnard 68 Dark Cloud.....	127
The Standard ISM Extinction Curve	147
Mie Theory Results 1	154
Mie Theory Results 2	155
Mie Theory Results 3	156
Mie Theory Results 4	157
The Index of Refraction for Forsterite	158
Mie Theory Results 5.....	159
(a) Transient Heating Simulation.....	162
(b) Detail of a Few Random Heating Events.....	162
Large Grain Transient Heating Simulation.....	163
Optical Spectrum of the Red Rectangle	166
HST Image of the Red Rectangle	167
CO Map of the Orion Region	192
(a) High Resolution CO Map of the Orion Region.....	193
(b) Structures Observed in the Orion Region.....	194
Infrared Map of the Orion Region.....	197
Wide Field Photograph of the Orion Region.....	199
Wide Field Image of the Orion Region	200
(a) Image of the Orion Cloud Region.....	204
(b) Image of the Orion Nebula.....	205
(c) HST Composite Image of the Orion Nebula.....	206
(d) Comparison of Radio and Optical Images.....	207
HST Image of the Trapezium Stars	208
HST Image of the Trapezium Stars (2).....	209
20 μm Image of the BN/KL Nebula.....	213
Major Sources in the BN/KL Nebula.....	214
Explosive Structure Near the BN/KL Nebula.....	216
Explosive Structure Near the BN/KL Nebula (2).....	217
(a) Infall Similarity Solution Density Function.....	228
(b) Infall Similarity Solution Velocity Function.....	229
(c) Infall Similarity Solution Mass Function	230
Optical Spectra for 4 T Tauri Stars	235
Optical Spectra of Some T Tauri Stars.....	236
Line Emission Dominated T Tauri Optical Spectra	237

(a) Short Wavelength Optical Spectra of T Tauri Stars	238
(b) Short Wavelength Optical Spectra of T Tauri Stars	239
HR Diagram for Some Herbig Ae/Be Stars	242
Photometry of Sudden Declines in BF Ori	243
Spectral Energy Distributions of two Herbig Ae/Be Stars	244
ISO Spectra of Two Herbig Ae/Be Stars	245
Observations of a Disk Around AB Aur	246
Light Variations in 3 FU Ori Stars	248
High Resolution Optical Spectra of 3 FU Ori Stars	249
The Spectral Energy Distribution of FU Ori	250
CO First Overtone Bands in 2 FU Ori Stars	250
Infrared Spectrum of RAFGL 7009S	253
Infrared Spectrum of L1551 IRS5	255
Infrared Spectrum of NGC 7358 IRS9	256
Infrared Spectrum of T Tauri	257
Molecular Line Observations of B335	258
Molecular Line Spectra of NGC 2023	259
Molecular Line Spectra of NGC 2023 (2)	260
CO Line Map of NGC 2023 MM1	261
Molecular Outflow from IRAS 20126+4104	262
(a) Molecular Lines in Low Mass YSOs	263
(b) Molecular Lines in Low Mass YSOs	264
(a) HST Image of HH1/2	266
(b) HST Image of HH30	267
(c) HST Image of HH47	268
(d) VLT Image of HH34	269
(a) HST Images Showing Protostellar Disks	270
(b) HST Images Showing Protostellar Disks and Jets	271
(c) HST Images Showing Protostellar Disks and Jets	272
Radio Detection of Two Disks in L1551 IRS5	273
An optical image of the LMC, taken at the Cerro Tololo telescope	276
An optical image of M33, taken at the Isaac Newton telescope by David Malin	277
The 30 Dor Nebula in the Optical and in X-rays	278
Wide Field Image of the Tarantula Nebula	279
HST Images of the R136a Complex	280
An HST Image of NGC 604	281
A VLT Image of NGC 3603	282
An HST Image of the Nucleus of NGC 4314	283

Optical Image of NGC 1569284
HST Image of NGC 4214 285

List of Tables

H Recombination Coefficients	12
H β Case A and Case B Constants	19
Predicted H Recombination Line Strengths	20
H Recombination Line Strengths at Finite Densities	22
Line Strengths for the p^2 Forbidden Lines	26
Line Strengths for the p^4 Forbidden Lines	28
Line Strengths for the p^3 Forbidden Lines	30
Predicted Ionizing Photon Fluxes	34
Lines Observed in the ISO Orion Nebula Spectrum	48
Some Optically Identified HII Regions	50
Estimates of Power Inputs to the ISM	115
Parameters of the Trapezium Stars	210
Derived Properties of Some T Tauri Stars	240
HH Object Emission Lines	265
